

TransFER

Wels–Lübeck–Kiel

From mid-October, we will be offering a high-frequency TransFER connection between the logistics centre of Wels in Austria – a hub for rail freight in Central Europe – and the strategically important ports of Lübeck and Kiel in Northern Germany. As one of Germany's largest Baltic Sea ports, Lübeck offers excellent connections to Scandinavian markets and beyond. The antenna connection to Kiel complements the TransFER as an extension of the logistics chain to Northern Europe. With four round trips a week between Wels and Lübeck and additional connections three times a week from Lübeck to Kiel, we offer a high-performance solution for your transport operations – both in wagonloads and containers.

Your benefits at a glance

- Sustainable rail transport in mixed trains – suitable for both conventional wagonloads and intermodal flows of goods
- Comprehensive end-to-end logistics solutions, including first and last mile organisation to get your freight to its destination smoothly
- Additional forwarding services such as terminal services, transshipment options, modern warehouse logistics and professional customs clearance
- Fixed timetable for high reliability and predictability of your transports
